IT Support Guide

Laptop requests, VPN, email, access and service desk procedures

DEMO DATA NOTICE
Fictional policy content created solely for the SecureRAG portfolio project. All names, email addresses, procedures and monetary limits are synthetic examples. Do not treat this document as a real employer policy.

1. IT service desk

The TechNova IT Service Desk handles company laptop issues, approved software, email access, VPN connectivity, account lockouts and standard access requests. Submit tickets through the internal service portal or email ithelp@technova.example.

Sample service hours are Monday to Friday, 9:00 a.m. to 6:00 p.m. Local business time. A ticket number is generated after submission.

2. Requesting a laptop or accessory

New laptop requests must be submitted by the employee's manager through the service portal. Include employee ID, role, department, business justification and required delivery date.

Standard equipment is a company-managed laptop, charger and headset. Additional monitors or specialist hardware require manager approval and inventory availability.

3. Connecting to the company VPN

Step 1: Connect to a trusted internet network. Step 2: Open the company VPN client installed by IT. Step 3: Sign in using your company account. Step 4: Complete multi-factor authentication. Step 5: Confirm the VPN client shows Connected before accessing internal systems.

If VPN connection fails, record the error message and time, check that the device clock is correct, restart the VPN client, and open an IT ticket. Never send your password or MFA code to the service desk.

4. Password reset and account lockout

Use the company identity portal and select Forgot password. Verify your identity using the configured recovery method and create a new password that meets the password policy.

If your account is locked, wait 15 minutes and try again once. If it remains locked, contact the IT Service Desk. Support staff will never ask you to disclose your current password or one-time passcode.

5. Email and collaboration tools

Access company email through the approved web portal or managed mail client. Report suspicious messages using the Report Phishing function. Do not open unexpected attachments or enter credentials after following an email link.

6. Incident priority targets

Priority 1 — Critical business-wide outage or suspected active compromise: initial response target 30 minutes during service hours.

Priority 2 — Major team service disruption: initial response target 2 business hours.

Priority 3 — Individual user issue with a workaround: initial response target 1 business day.

Priority 4 — General request or how-to question: initial response target 2 business days. These are sample targets, not guaranteed resolution times.

7. Device loss or suspected compromise

Immediately contact the IT Service Desk and your manager if a company device is lost, stolen or suspected compromised. Provide the device asset tag if available. Do not attempt to investigate suspected malware by deleting files or reinstalling software unless IT instructs you to do so.
